The Sources lists most of the published material from which the data of the atlas have been derived. Unpublished material is listed when it conforms to the following: (a) it is routinely available from the originating agency, or it is in a repository such as an archives to which the public has access; (b) it is a map manuscript compiled specifically for the atlas in an agency other than the Surveys and Mapping Branch. The term "Personal Communication" refers to persons who have supplied large quantities of unpublished information other than a map manuscript, derived from their personal research, specifically for the atlas, and upon which the atlas map is substantially based; and to a few persons, otherwise uncredited, whose specialist advice crucially affected the concept and contents of an atlas map.

Unlisted material may be classified as follows:

(a) Current maps of the National Topographic System and similar provincial maps, unless they are the major source of data for an atlas map, in which case they are collectively cited.

(b) Miscellaneous early topographical maps in archival collections (about 100 maps).

(c) Miscellaneous current, thematic maps, covering an agency's service area, usually unpublished (about 50 maps). In cases where an atlas map is substantially based on such maps, the supplying agencies are listed.

(d) Short unpublished lists of data or single items of information, provided by public and private agencies, and individually forming a relatively small part of the data used for an atlas map. In cases where an atlas map is very substantially based on such information, the supplying agencies are listed (about 225 receipts of information).

(e) Answered questionnaires (75).

(f) Personal communications from individuals on one or a few items of information derived from their personal research (about 50 instances).

The agency (author) most frequently cited is: CANADA, Dominion Bureau of Statistics. This is abbreviated to: CANADA, DBS. Similarly, Census of Canada/Recensement du Canada, published by the Dominion Bureau of Statistics (now Statistics Canada), is abbreviated to: Census/Recensement. The catalogue numbers given in these citations are referable to the catalogue maintained by Statistics Canada, and in many cases provide reference approximately to the level of a chapter in a book.
